

THE NORFOLK ANGLERS CLUB

WIRELINE

DECEMBER 2020

What's Inside

Fishing Tips; Fall and Winter Inshore Fishing: The When, Where, How, and Why's with William Ragulsky, Johnson Outdoors and YakAttack Pro Staff

Fishing Reports;

- Little Creek: Speckled Trout, Puppy Drum, Rockfish
- Lynnhaven: Speckled Trout
- James River: Rockfish, Blue Catfish
- Elizabeth River: Speckled Trout
- Offshore: Golden Tilefish, Black Belly RoseFish, Hake, Flounder, Sea Bass, Bluefish
- Inshore/Bay Wrecks: Black Sea Bass, Puppy Drum, Tautog, Black Drum, False Albacore, Almaco Jack, Bluefish, Triggerfish, Pinfish

Leadership Notes...

Fellow Norfolk Anglers,

Over the past few years our local angler clubs and businesses have contributed generously to the Marine Corps Toys-for-Tots campaign through toy donations and contributions. This year has been difficult for many and I'd like you to help make the holidays better for many of the children in Hampton Roads by donating to the program through a link Sea Tow Hampton Roads has created on their FaceBook page or use the QR code below. All donations remain local and benefit the children in our area. So please visit the Sea Tow Hampton Roads FB Page and give generously.

With 76% of the goal met for this year's Holiday Toy Drive and only a short while remaining, I ask that each of our members consider making a donation to the Toys-For-Tots campaign. For every dollar donated 97% goes toward the children in our community and 100% of your donation is tax deductible.

Scan to Donate

Meeting

Our next Club meeting is scheduled for December 14 will be a video networked meeting on Zoom.

Important:
November NAC Meeting will
be on Zoom *December 14*

Norfolk Anglers Club Prize Fish Entries

January 1, 2020 - November 30, 2020

Freshwater	
Species	Name (#Entries)
Blue Catfish	Mary Troutner (1)
	James Eisenhower (1)
Largemouth Bass	James Eisenhower (1)
	Russel Willoughby (1)
Crappie	James Eisenhower (3)

Saltwater	
Species	Name (#Entries)
Shark	Greg Rogers (1)
Blueline Tilefish	James Eisenhower (2)
Flounder	Louis Glaser (2)
	Alex Perez, Jr. (1)
Cobia	Alex Perez, Sr (1)
Speckled Trout	Bert Sainz (1)
	James Eisenhower (4)
	Ned Smith (1)
Black Drum	Ned Smith (1)
Spanish Mackerel	Alex Perez, Sr. (1)

****Virginia Saltwater Tournament (Saltwater) or Department of Game and Inland Fisheries (Freshwater) Citation paperwork or the Norfolk Anglers Club Prize Fish entry form may be submitted to James "Ike" Eisenhower at the regular meetings or send via email to NorfolkAnglersClub@gmail.com

New Permitting and Reporting Requirements for Recreational Blueline and Golden Tilefish

Effective August 17, 2020, all recreational vessels fishing for blueline or golden tilefish must have a permit and report their trips within 24 hours of returning to port.

Who Does This Impact?

- Vessels fishing for or retaining tilefish from Virginia to Maine.
- For-hire vessels holding an existing GARFO permit who take private recreational tilefish trips.
- States may have additional permitting or reporting requirements for recreational fishing.

What Do I Need To Do?

- Obtain a Private Recreational Tilefish Permit from the Greater Atlantic Regional Fisheries Office (GARFO).
- Report your trip with one of the available reporting options.

Why Is This Happening?

- To better characterize and monitor the tilefish fisheries for long-term sustainability.
- More information can be found on the Mid-Atlantic Fishery Management Council's tilefish web page: mafmc.org/rec-tilefish-evtr.

Permitting (Search: GARFO Permits)

You must apply for your permit online. There is no cost for the permit.

How Do I Get a Permit?

Start with registering an account on the **GARFO Fish Online** website: greateratlantic.fisheries.noaa.gov/apps/login/

- Create a user name and password.
- Existing permit holders may apply through their current Fish Online account.
- Click Initial Private Recreational Tilefish Permit.

Reporting (Search: GARFO eVTR)

You must report all trips that either targeted or retained tilefish to GARFO within 24 hours of returning to port using an approved electronic vessel trip reporting (eVTR) system.

How Do I Report?

eVTR apps are available for smartphones and tablets. See our website for reporting options and how to get started.

For assistance contact our Help Desk at (978) 281-9188 or nmfs.gar.helpdesk@noaa.gov. For additional support, contact your local Port Agent. (Search: GARFO Port Agents)

Redfish Spots Tournament

Fall and Winter Inshore Fishing: The When, Where, How, and Why's

with William Ragulsky, *Johnson Outdoors* and *YakAttack* Pro Staff

Fall and Winter offer some of the best fishing opportunities in our area. Mid-September water temperatures around 60 degrees is a good time to target Red and Black Drum, Sheepshead, Gray Triggerfish, Tautog, and Speckled Trout. As the days get shorter, prey begins to migrate and fish actively feed in preparation for the cold and their own migration. Movement of bait fish and your target species can be fairly predictable and with a little bit of planning and preparation you can maximize your time on and off the water.

There's a number of factors to consider when planning a fishing trip. Tides and Currents, Weather, Time of Day, and Water Temperatures are to name a few. Of these, Tides and Current are the primary factors to take into consideration. Water levels will help you determine where you're going to fish. Tides are the rise and fall of the water level and vary in height and time wherever you are. Currents are the horizontal movement of the water and can be driven by bottom contours, wind, tidal flow or a combination of all these factors. Knowing how an area is influenced by both tide and current is valuable local knowledge. William Ragulsky recommends looking for areas of "slicks" or eddies, both of these areas indicate feeding activity or where bait fish might be concentrating in the slower water. When it comes to a tide preference, William Ragulsky favors the falling or dead low tide. He explains, whether you're fishing from a boat or kayak, wading, or shore fishing, the tail end of the falling (ebb) tide is washing bait fish toward deeper water, creating eddies, and staging the bait in certain areas. Those areas are where you're going to find the predatory fish looking to feed on an easy meal.

For weather information, William uses local weather forecasts to track approaching cold fronts and changes in the barometric pressure. He shared, fishing just prior or immediately after a cold front has always been more productive for him. He cautioned, that it's not really about the cold temperature associated with the front as it is about the dropping atmospheric pressure. The falling barometric pressure signals the fish it's time to focus on feeding. He added, rising barometric pressure has always been the least productive time during the fall/winter.

The time of day is another consideration and much like weather conditions, as the day gets shorter and water cools, time of day becomes increasingly more important. William Ragulsky tends to not fish as much during the first half of the day in the cooler months. He wants the solar radiation to warm the water, in ideal conditions an incoming tide would flood over a flat during the afternoon and warm the water. Fishing the edge of that flat as the warmed water drains away is carrying the bait fish toward the deeper water and awaiting predatory fish. Using this tactic has been very successful, even when fishing after dark. William recommends to take all precautions while fishing at night, including always wearing a PFD, keeping your boat/kayak lit with regulation lighting, and maintaining a sharp lookout for other vessels.

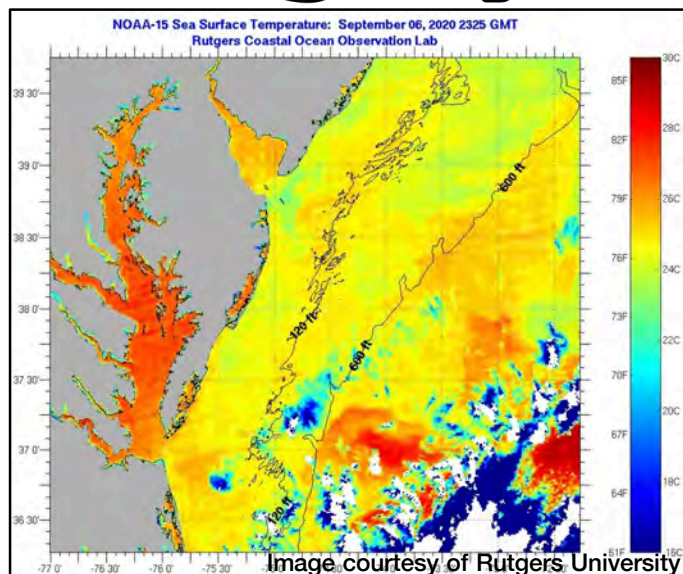

The last factor William Ragulsky expands on is Water Temperature. Though already discussed somewhat with regard to time of day and solar radiant heating, his point on water temperature is focused on the average daily

Norfolk Anglers Club

www.norfolkanglersclub.com

Fishing Tips...

temperature range and not daily spikes. Water temperature is important to an anglers because it's where you're going to find the bait. Where there's bait, you're going to find predatory fish, like speckled trout, red drum, rockfish. Predatory activity is tied to temperature ranges and understanding what species prefer is important in targeting them. William prefers water temperatures in the 55-68 degree range for speckled trout, 55-75 degrees for red drum, and 50-66 degrees for rockfish. He cautions that this is not an absolute range of temperatures that you can or cannot catch fish. He adds, that he's caught rockfish and speckled trout in water as low as 40 degrees and red drum as low as 46 degrees. Understanding how a species feeds within a temperature range lends to how you present your lure. When fishing outside of the optimal temp range, specifically on the colder side, anglers should tend to fish larger baits very slowly. In cooler water fish are looking to fatten up and not spend a lot of energy chasing a meal. Presenting a larger slow swimming lure makes for an irresistible and easy meal for a predatory fish.

Where to fish? It's sometimes heard on a fishing trip "Don't leave fish to find fish." William suggests if you've got a few fish in the class you want and know there's bait fish around, don't be reluctant to try multiple presentations and lures to dial in on what the fish prefer. To locate "fishable" areas, look for bottom contour transitions, grass & riprap shorelines, submerged grass beds and underwater structure, sand & soft bottoms. Changes in the bottom makeup, however small, are enough of a change to hold predatory fish.

Navigation plotters and software, like the Navionics image (left), are good to identify areas anglers should check out. In the image you can see a number of stepped 4-5 ft transitions from the shore to deeper water. Predatory fish will often remain in deeper water when it's cold to avoid quick water temperature changes. Anglers can see the results of sudden water temperature change, often called "cold stun events", when the fish become lethargic or float on the surface.

Using a navigation software is a good first step in locating areas to explore. William recommends also using imagery mapping, like Google Maps, to review satellite images of an area. Depending on the quality of the images, you should be able to locate the shallow water, grass beds, obstructions that are visible at low tide, sand bars, and a general idea of how water flows around the area. All of these are valuable bits of information in scouting out a fishing area.

Norfolk Anglers Club

www.norfolkanglersclub.com

Fishing Tips...

The "How" and Lures...When fishing a passing cold front the retrieve should be painfully slow. Remember, in the late fall the predatory fish are looking to fatten up for the winter and/or migration. They're looking for easy prey and not to expend a lot of needed energy chasing food. Anglers may want to try differing retrieval speeds to determine what entices the bite however, in cold water, start slow! In cold water, William prefers presenting larger baits as they represent a nice big easy meal. If the larger baits aren't working it may be time to switch tactics and go small.

MirrOlure® Paul Brown Lures

Trying working small (1/8oz) Crappie jigs, paddle tails, tube jigs, all on lightweight line. There's a wide assortment of styles, colors, and sizes of hard and soft baits on the market. The choices seem endless so anglers should select a lure and learn how to work it in various conditions.

One of William's favored lures is the Paul Brown "Fat Boy" or "Corky" lure. It's produced by MirrOlure, weighted to 7/8 ounce and is 3 1/2" long. It's got a soft body and double treble hooks. He likes the All Purple (#54) color and shares that it works very well in all conditions and locations. Also shown (left) is the Paul Brown "Original", also a soft body lure weighted at 3/4 ounce and 3 5/8" in length. It's slimmer than the "Fat Boy", the Black/Gold/Orange color (09) is shown.

Along with the Paul Brown series of lures MirrOlure® has a vast selection of hard baits. Selections include lures for top water, suspending, and sinking applications. Favored by many anglers is the 17MR series of hard bait. It's small, measuring at 2 5/8" long and weighing 3/8 oz. The 17MR is designed to suspending in the water column 0-24+ inches. The 18MR "Heavy Dine™" series is the same size as the 17MR but weighted a little bit heavier at 7/16 oz. Both the 17MR and 18MR are pictured right. Favored colors for darker waters, like the Elizabeth River is the Black, Orange and Silver body (#808). Next up in size is the 27MR, at 3 1/8" and 9/16 oz. It too is designed to suspend 0-24." William shared another one of MirrOlure's® suspending wide-body produces is the S25MR Catch 5™. It features a large holographic flash and suspends at 12-18". Weighted at 3/4 oz the Catch 5™ lure can be cast a "Country Mile", as William describes. MirrOlure® produces many other great lures. When you find a color combination you prefer it's easy to get other lures in that color combination, just remember to the color code on the package.

A new soft lure on the market is *The Slick* by Pure Flats. It's a soft plastic, non-weighted, slow sinking jerk bait for shallow water, flats, bays, grass beds and any other application where you want a slow sinking bait. It's a single hook weedless lure rigged with an extra wide gap hook, such as the Owner Beast Hook. The Owner Beast Hooks have a TwistLOCK® Centering-Pin Spring (CPS) designed to be screwed into the center front of the soft plastic body. The wide gap hook is then positioned up through the divided body cavity and positioned atop the lure. For a true weedless rigging the hook point can be aligned along the top of the body or angled down and slightly imbedded in the plastic. The hook point can also be exposed if that presentation is desired. See both rigging options in the photo (left).

Norfolk Anglers Club

www.norfolkanglersclub.com

Fishing Tips...

Another weedless lure option is the D.O.A. C.A.L. Series lure, (Photo left). It's a 5 inch long, soft plastic lure with a vertical tail and a wide body slotted bottom. Anglers can rig this lure with a long shank jig head or one of the extra wide gap hooks. Using a weighted wide gap hook is the anglers choice.

Whether selecting the D.O.A or the Pure Flats lures they are perfect for targeting speckled trout and puppy drum in the grass beds and oyster bars. Unlike treble hooks that can snag grass and oyster beds, when rigged as a weedless lure these will minimize hang ups and lost rigs. D.O.A also has a line of Paddle - Curl Tails, Shad Tails, and Jerk Baits.

Popping corks are a great option when you're fishing over structure, including grass flats and oyster beds. William cautions about getting too hung up on the leader length. The leader can be any length you desire for the depth you're fishing. You want to keep the bait off the bottom. The momentary twitch of the rod

causes the cork's rattles to sound off and combined with the surface ripples draws attention to your bait. Fish will be drawn toward the commotion of the popping cork and discover your bait. Baits are commonly artificial shrimp or jig heads but live bait is also extremely effective.

Norfolk Anglers Club

www.norfolkanglersclub.com

Fishing Tips...

Top water action or "Walking the Dog" is all about drawing predatory fish's attention to an easy meal. Color isn't a huge factor as William explains. He prefers dark lure colors in daylight and lighter colored lures on heavy overcast days or at night. He recommends providing as much contrast in the water to help draw attention. As important as contrast is the amount of water you're pushing as you work the lure is equally important. You'll want to bring as much attention to your bait as possible and that's contrast, commotion, and sound. Many top water lures incorporate rattles and depending on how many and size you'll get differing rattle sounds.

Images courtesy of Lucky Craft

Lucky Craft makes the Sammy 100, a 4 inch 1/2 ounce weighted top water lure in an incredible amount of color options. It features double treble hooks and glass rattles. Its slightly curved body and eye position gives you great top water performance.

MirrOlure® also makes a number of top water lures. A common feature of these lures is their high buoyancy which makes working this lure easy. MirrOlure's® line of *Pro Dog Jr.*, *She Dog*, *She Pup*, *Top Dog*, and *Top Dog Jr.* are all weighted at 3/4 oz so casting distance isn't a problem. Depending on angler's choice lures are available with low frequency or high frequency rattles.

Take Aways

- Heavy Overcast or night: Light Colored Lure
- Bright Skies/Clearer Water: Darker Lure
- Colder the water: Slower the retrieve, painfully slow
- Bigger, Slower Baits make the easiest meals with less energy for a feeding fish in cooler water
- Do research, know the conditions, then consistently fish an area. Small changes in condition make big differences

Fishing Reports...

4 NOV: I waited for AJ to end school, then we headed to the Cape Henry wreck.

Fishing the out going tide using Blue Crab, we caught Black Sea Bass up to 13 inches, an Oyster Toadfish, a large American Eel, and a Puppy Drum at 19 inches.

The heart breaker of the trip was a very large Black Drum AJ fought for over 15 minutes, only to watch it pull the hook at boat side.

- Alex Perez

19 NOV: Around 9:00 am Bert and I went to Little Creek jetty for speckled trout and puppy drum. Because of all the rain here and up North, the incoming Bay water was very dirty and thus unfishable. So, we went to Pretty Lake where the water was fairly clean but we had no bite. When the tide started moving out of pretty lake, we went back to the jetty again. The water was cleaner with the tide change and it triggered a short bite. We finished with 4 puppy drum; 1 drum caught by Bert was 25 inches. We also caught a few small speckled trout. Water temperature was 56 degrees and all the fish were caught on jigs. - Ned Smith

3 NOV: I saw my buddy Paul Euing fishing from the dock on a nice morning and invited him along.

We caught a lot of throwbacks and these nice keepers. The big boys were nice and fat.

- James Robinson

19 NOV: Fished with Louis Glaser at the jetties at first but no joy there in the morning, so we headed to the Pretty Lake.

Started catching puppy drums on a 17MR but all were around 17 inches. Then I hooked a big trout. It gave me a good fight pulling drag but it ended in the net.

It was 20 inches and this made us think we found a school. No such luck, we caught just that one so I took it as a club minimum release.

- Dr. James W. Ike Eisenhower

MAKE A CHILD'S HOLIDAY A LITTLE BRIGHTER

Out of concern for the health and safety of the community and our team, we made the decision to change our annual Stuff-a-Boat Toy Drive from an in-person collection to online donations.

**NOW MORE THAN EVER, TOYS

4 Nov: A quick run to the Norfolk Canyon with Jere Humphrey and Chris Webb aboard my Parker 28. We had very calm seas and made a quick transit to the Canyon and later to the WWII wreck Ocean Venture. Conditions were near perfect for deep dropping with very little drift and calm seas. During the day we saw only one other boat trolling for pelagics in the distance.

Although the tilefish bite was slow, we boated a nice class of Golden Tilefish in the 16-25 pound range and a number of Black Belly Rosefish. Chris even pulled up a keeper Flounder from 550 ft on a 10/0 circle hook tilefish rig! Jere reeled in a nice Bluefish before we headed west.

We cranked aboard quite a few undersized Black Sea Bass on the wreck but managed to keep a lot of nice fish.

Sea Bass under 14 inches were measured and tagged for the Virginia Game Fish Tagging Program and then released at depth with a descending device.

With good friends and great weather we had a fantastic day on the water. Many Thanks to Chris and Jere for making it a great trip!

- Will Bransom

4 NOV: Louis Glaser and I fished the Little Creek targeting striped bass for the first time this season at sunrise. No one else was out there for a change. There was no wind so it was perfect topwater time.

We caught 6 before the bite stopped. They were 21 to 25 inches, really fat fish. We kept our limit of one 25 inch striper each.

The blowups on the topwater lures MirrOlure She Dogs were fantastic. Air temperature was 45° water temperature 57°. Then, we hunted trout and puppies with lead heads and gulp. We caught 4 pups about 17 inches and Louis caught a 25 inch pup that gave him a tough fight.

It's weird but we haven't caught any trout here for two weeks but it was a great start of striper season for us.

Virginia Printing & Signs

Division of JAMMAC Corporation

Brian A. Getz

Email: virginiaprinting@aol.com

6610 E. Virginia Beach Boulevard • Norfolk, Virginia 23502

14 NOV: I went fishing with Louis Glaser and his girlfriend Hai. It was slow starting since it was just past high tide when we got there at the jetties. We only caught some throwbacks. We tried three different places until the current started to pick up. I managed to hook a keeper after throwing up current and letting the 27MR drift with the current for a long moment.

Louis was right behind with his keeper which started us catching one after another. In about an hour, we hooked and boated 12 speckled trout between 17-20 inches. Water temperature then was about 61 degrees and water depth was 5 feet. That made our day!

- Dr. James W. Ike Eisenhower

6 NOV: Over the weekend, our friends Tom and Sue from Pennsylvania, who passed their Shamrock Boat along to me, came to visit.

Although the Shamrock is still waiting on a carburetor from Holley, we did get out to Striper fish with George and John from the Coast Guard Auxiliary.

A great time was had by all.

Note: We have been trolling Stretches for several years with great results but having recently been introduced to Bandit Deep Divers we are converting.

The Bandits have more wiggle, a louder rattle and are catching more when fished side by side with the Stretches. The Stretches cost \$10.00 to \$12.00 while the Bandits cost \$5.85 to \$7.00. *Sharing this kind of information is what makes Norfolk Anglers Club the best.*

- Henry Troutner

25 NOV: Good day in the Elizabeth River.
- Jerry Hughes

3 NOV: I fished with Louis Glaser at Little Creek from 2:00 pm to sunset. We caught a dozen undersized puppies only one 18 inch released.

But we did witness a SEAL Team practicing the Special Patrol Insertion/Extraction system with MH-60 helicopters. So I took this picture which is amazing on my new Samsung 20S FE cellphone.

Fun time with the puppies and a real life military demonstration to boot. Great time.

- Louis Glaser and Dr. James W. Ike Eisenhower

1 NOV: After culling a bunch of small ones, I finally got dinner before the rain started in the morning.

- James Robinson

17 NOV: Got a nice one on a cold morning. - James Robinson

6 Nov: AJ and I did another after school special to the Cape Henry wreck. Once again using live Blue Crabs, we may have found every Oyster Toadfish on the wreck.

Smiling for Toadfish!

AJ did find one 15 inch Tautog and a handful or Black Sea Bass to 13 inches. Hoping to find the Black Drum that got away from him earlier in the week, AJ did find a smaller Black Drum at 20 inches. - Alex Perez

AJ and a tagged Black Drum for release.

Tagged and released Tautog

7 NOV: Mike Burton and I tried to hit the JRB for striper early on a Saturday, but were held up by heavy fog. We finally arrived at JRB around 11:00 am and within five minutes had our first short striper. The weather remained excellent throughout the afternoon with calm winds and flat seas. We worked the pilings along the bridge for about four hours before hooking the second striper, a 26 inch keeper. The fish was full of tiny silver-side minnows. It was a slow day with respect to fishing, but once the fog broke - it was a great day on the water. We stopped by Norfolk International Terminal (NIT) on the Elizabeth River on the way home to try 30 minutes of speckled trout and although that wasn't "hot" Mike did catch a nice 17 inch that was thrown back.

14 NOV: I had about two hours to hit a spot near NIT on the Elizabeth River. I paid attention to a recent NAC presentation and knew it was predicted to be an "excellent" fishing day.

I caught one fish in the first ten minutes with a small pink Gulp, then switched to white and it was magic.

In 2 hours, I ended up catching over 60 - mostly small trout (and one spot) - but the fast action was a load of fun.

Of the 60 fish, mostly in the 10-12 inch range, I did catch three keepers, two shown in the photo above. Interestingly (at least to me) neither of the two speckled trout I cleaned had anything in their stomach - explaining why they were hitting the Gulp so hard.

I'm watching the solunar tables when planning trips going forward!

- Mike Davis

22 NOV: Caught this nice speckled trout on a Sunday morning in the Lynnhaven River with a white/pink tailed Bass Assassin.
- Bob Stuhlman

7 NOV: William Ragulsky and I went wreck fishing off the Virginia Beach Ocean front. We first trolled the area using a Drone spoon on a planer and caught two False Albacore. On the wreck, we began fishing with 2-3 ounce slow pitch jigs, tipped with and without False Albacore strips. We caught our limit of Black Sea Bass, along with individual Bluefish, Pinfish, Almaco Jack, and Triggerfish. It was a beautifully calm day with intermittent patches of fog. - Alex Perez

21 NOV: Mary, George and I fished with John Curry. We spent most of the day exploring a new area of the James River for Red's, but other then Mary loosing a pretty nice one, we didn't have much success with the Drum. Of course since we have to go right under the Chuckatuck Bridge, we couldn't resist a couple passes for stripers.

George connected with a beautiful 25+ inches.

- Henry Troutner

27 NOV: AJ and I went wreck hopping off the Virginia Beach ocean front to find we had the same idea as dozens of other boats. Every wreck we attempted had at least two boats anchored on it. We finally settled on a wreck that had no one else attached to it.

AJ and one of his
Black Sea Bass

20 inch Tautog tagged
and released

Fortunately we were able to catch our limit of Black Sea Bass up to 16 inches before being joined by other boats. Using live Blue Crab, AJ was able to catch six Tautog in between the Sea Bass. - Alex Perez

22 NOV: On a Sunday, John Curry and I headed out to the Chuckatuck Bridge where we trolled and drifter crab and shrimp. After almost 2 hours with nothing to show but a catfish, the striper bite finally turned on.

Within 20 minutes, we had a short and our 2 keepers, one was a nice 24+.

- Henry Troutner

SEA TOW.
